

# DIY Tabletop Shield

## Cookie Booth Tabletop Shield/Sneeze Guard

Courtesy of Troop 65430 of Highlands Ranch – Lone Tree

### SUPPLIES:

24" x 36" plexiglass panels

Sharpie marker

Gorilla mounting tape

Four Metal shelf brackets per sneeze guard

Machine screws/nuts (Six per sneeze guard)

### STEP One:

Use the pre-drilled holes in the shelf brackets to determine where to drill holes in the plexiglass. Mark with a Sharpie.

### STEP Two:

Drill the holes in the plexiglass panel. You will want to drill slowly to ensure that the plexiglass does not crack or break.

### STEP Three:

Once the holes are drilled, attach mounting tape to the shelf brackets to hold them in place on either side of the panel. The plexiglass panel will be sandwiched between the shelf brackets.

### STEP Four:

Screw the brackets into the holes drilled in the plexiglass using a locking nut to hold the brackets in place. Be careful not to tighten the screw too tight because the plexiglass can crack.
